Canvas fabric:

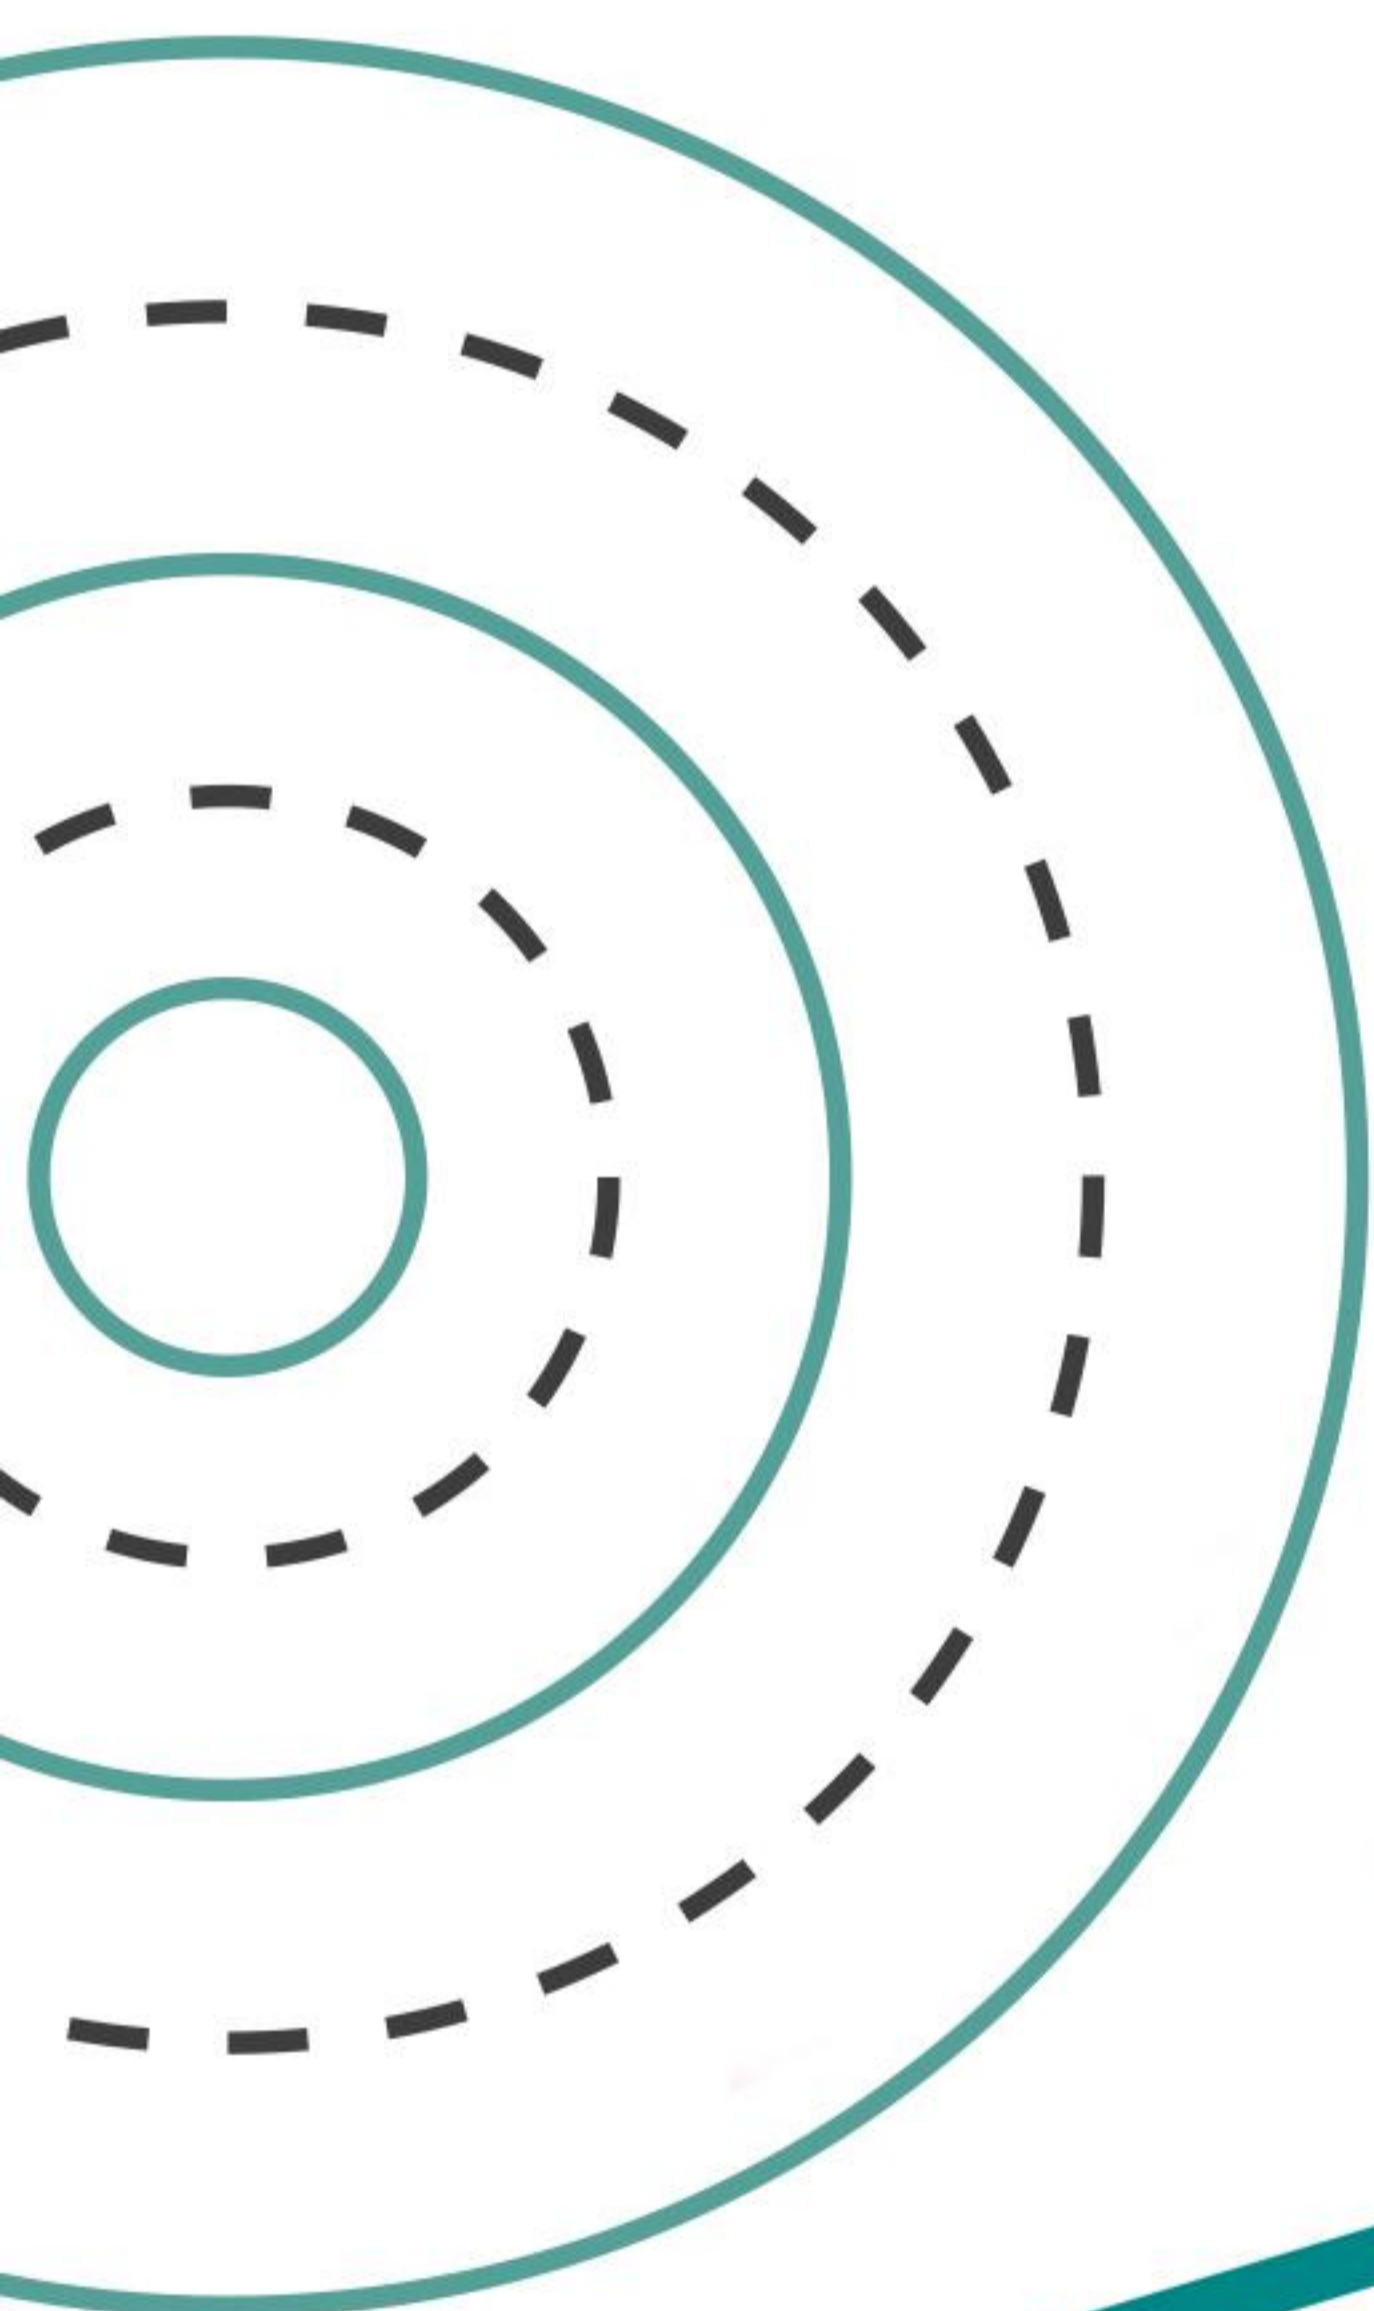

Canvas fabric is a combination of thread and cotton and, like most cotton fabrics, it is light and cool. An important feature of this fabric is that it is not fluffy and this feature has caused it to be used as a cleaning cloth. Canvas fabric is light, durable, and strong. It is also soft, easy to iron and sew. A cotton canvas fabric is made 100% from cotton warp and weft, which has different prices depending on different factors, the width of the fabric and so on. The other type of canvas fabric is called material Canvas fabric, which is made of polyester and filament and according to the percentage of these materials, it has different quality.

Canvas fabrics types:

Cotton Canvas Fabric

Linen Canvas fabric

Synthetic Fiber Canvas fabric

Canvas fabric material:

Generally, any fabric that is raw, and is just woven, is called canvas fabric; therefore, canvas fabric can have many types in terms of material, the most well-known of which in the export market are cotton, polyester, flamenco, viscose, etc.

Most of the canvas fabrics in this company are 2 meters, 10 centimeters, 160 centimeters, and 100 centimeters wide. Other widths are rarely demanded; the reason is that the width of the fabric decreases after completing the production process; as a result, the mentioned widths will result in 2 meters, 150, and 90 centimeters after the completion of the production process. The best export canvas fabrics are made from 20 to 30 grade cotton yarns. Yarn 30 is more delicate and has a uniform texture; yarn 30 is thinner than yarn 20. But due to the lower cost of yarn 20 it is more demanded.

Knitted fabric (tricot):

This fabric is special in a sense that it has a very soft and delicate texture. On one of its sides, knitted fabric is soft and on its other, it is rough.

Knitted fabrics have a very high strength due to its vertical texture, and it is used to sew clothes and products that need high durability and strength. Tricot can be used to sew all kinds of underwear, swimwear, socks and hats. Knitted fabric is a very general and all-encompassing name, and what distinguishes different types of knitted fabric is their fiber.

knitted fabric types:

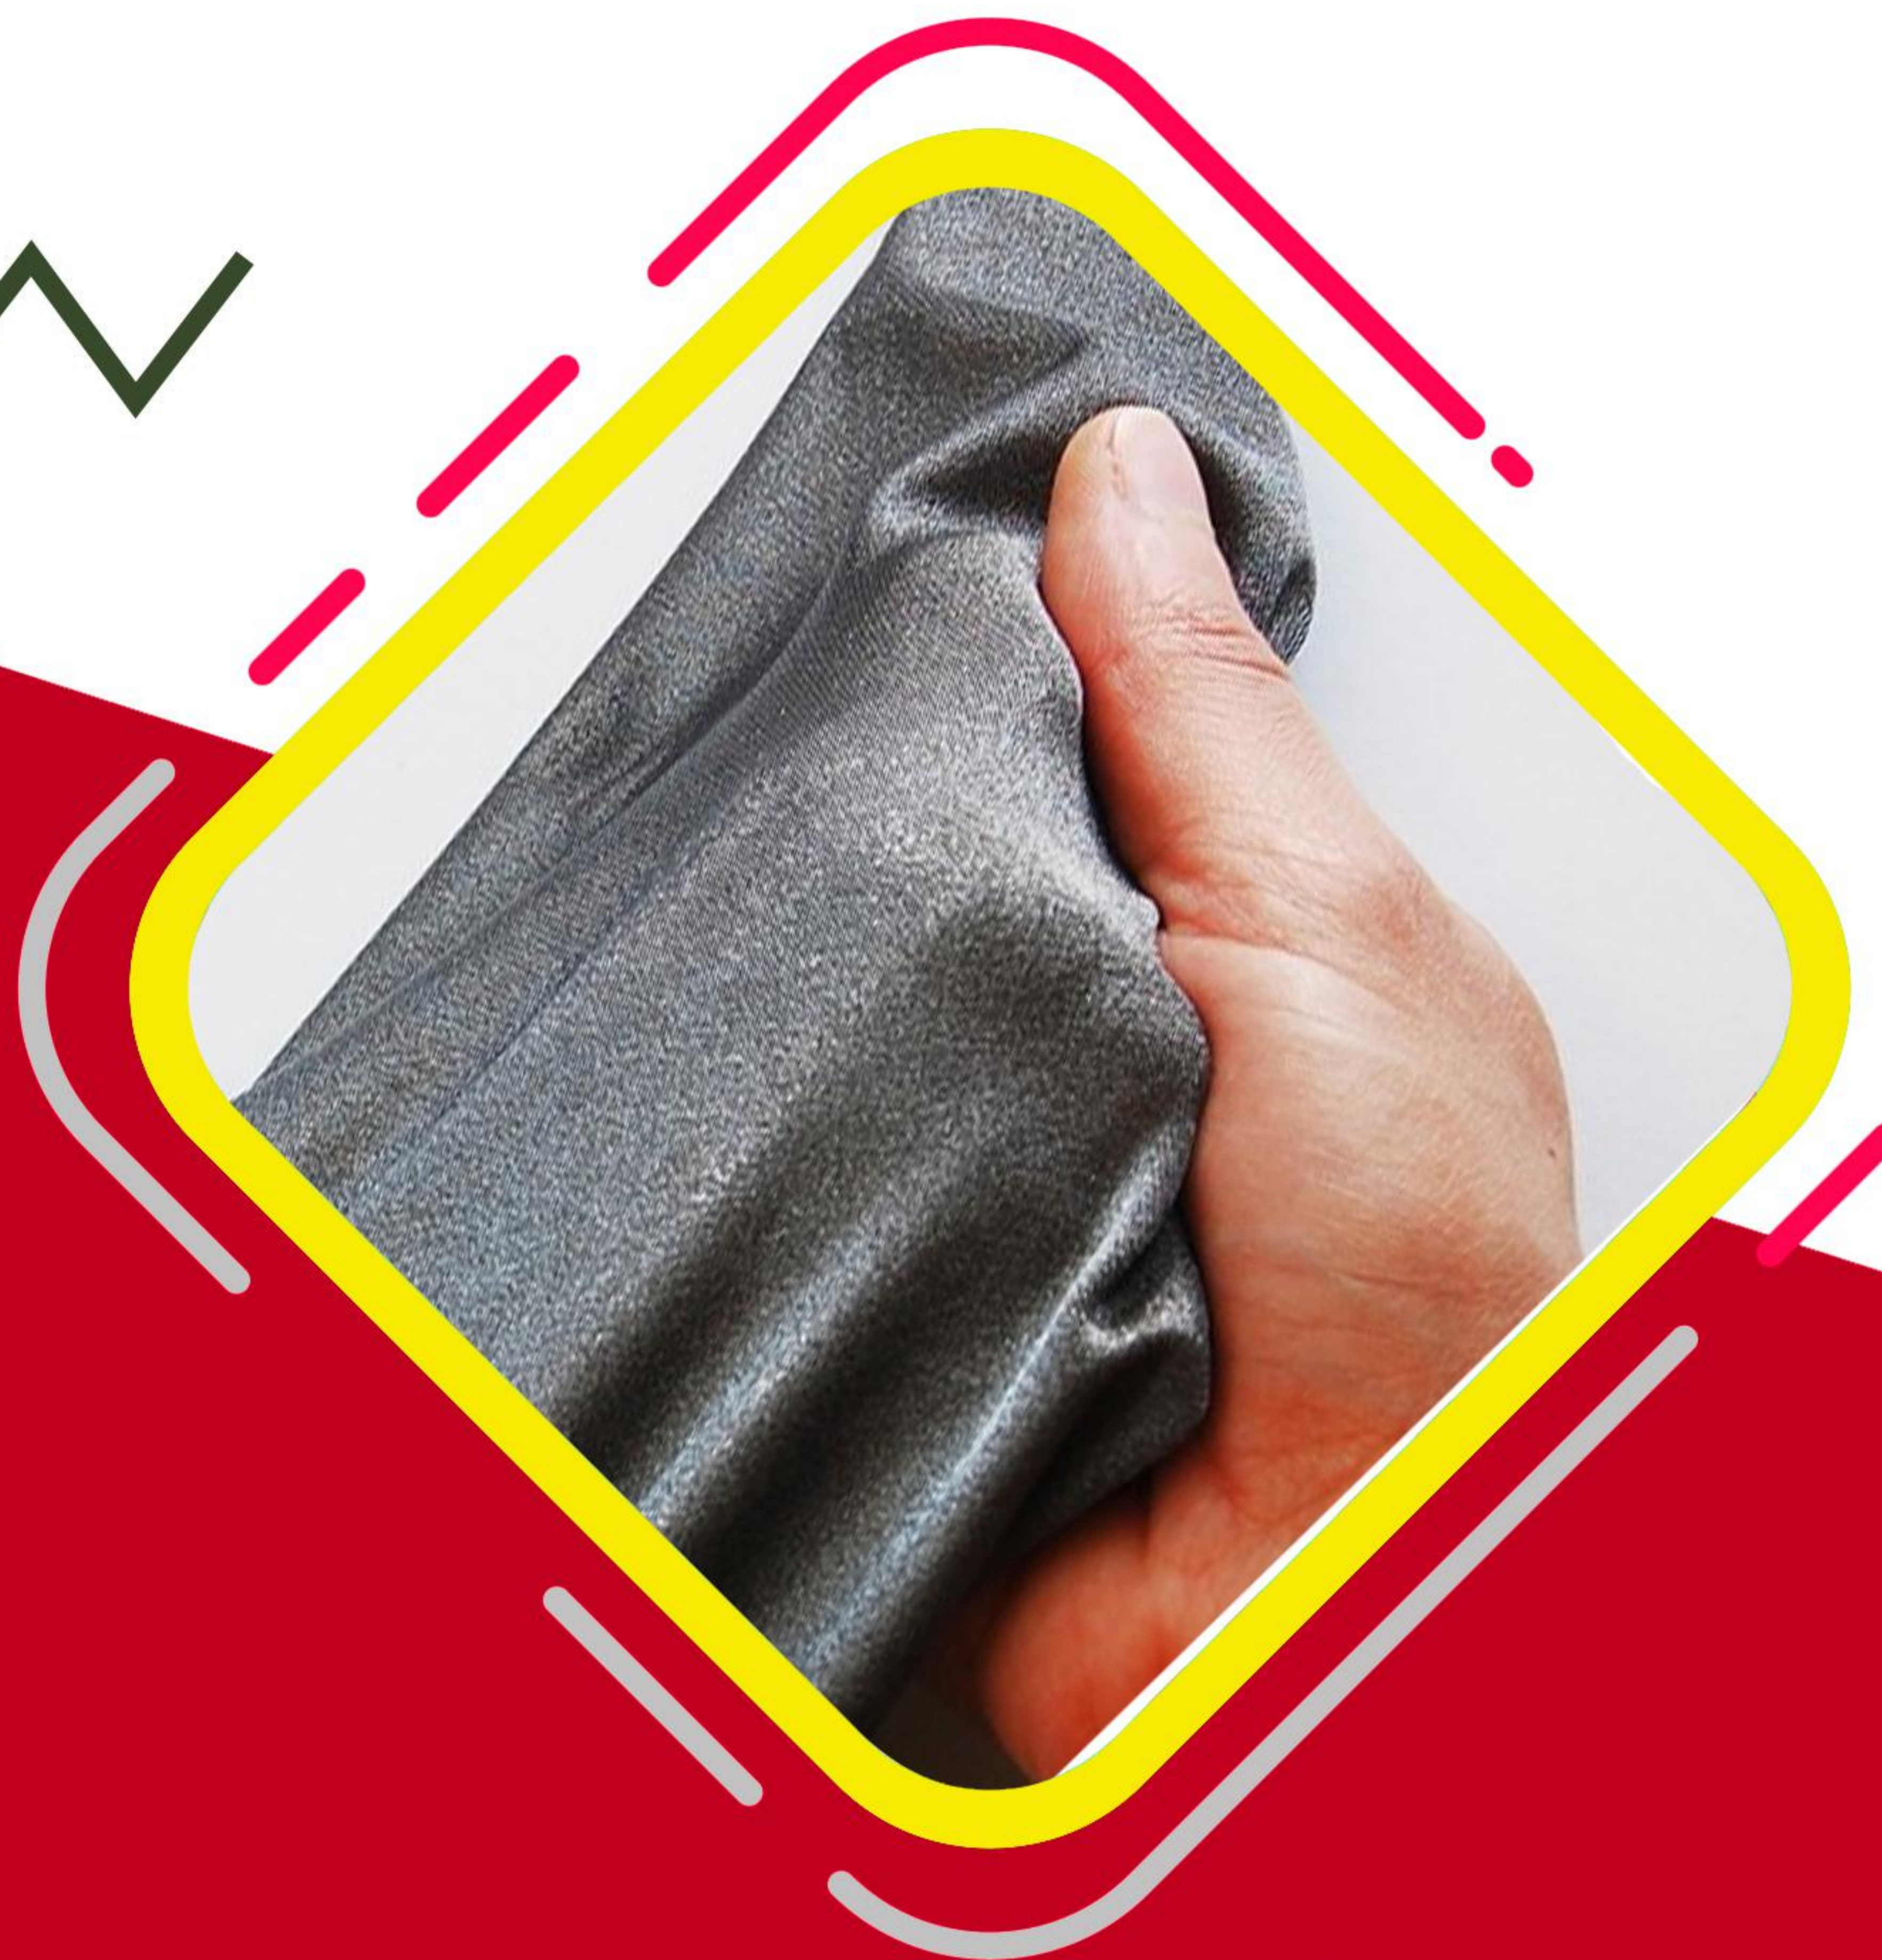

- **Polyester knitted fabric; Very durable and strong**

Polyester is a material made from oil and its derivatives. Polyester knitted fabric is made of polyester yarn and is woven in a thread pattern. These fabrics are highly resistant to water penetration and also to wrinkle. Since the color and quality of polyester fabric are usually durable they it is used to produce jackets, sportswear, overcoats, and raincoats.

- **Mélange knitted fabric; Used in the production of female clothes**

Different models of fabrics are used to produce women's clothing. Mélange fabric is more majestic and special than other knitted fabrics. In knitted mélange fabric, cotton and polyester yarn with certain percentages are used.

This fabric has good strength and is widely used for the production of shirts, skirts and dresses.

- **Knitted cotton fabric; To produce quality sleeping goods**

Prolonged skin contact with synthetic materials and coarse fabric fibers will damage the skin. For this reason, natural fibers such as cotton are used to produce bedding fabrics such as blankets and bedspreads. Among its different types, we can mention one-sided cotton fabric, two-sided cotton fabric, and a combination of polyester and cotton.

- **Viscose knitted fabric; Thin fabric with many uses**

Viscose knitted fabric is very popular and used mostly for the production of women clothing. Thin cotton shawls that have a fine texture and are easily threaded are made of viscose. Due to the low strength of natural fibers of viscose fabric, lacra yarn is combined with it to maximize the strength and durability of this fabric.

- **Lacra knitted fabric; Special and very functional fabrics**

Lacra fabric is also made of synthetic materials and has a durable and strong material. Due to its high elasticity, Lacra knitted fabric has become very popular for producing all kinds of jeans, women's coats, school uniforms

and sportswear. Lacra can open up to five times larger than its size and can return to its original size after washing. Lacra fabric can be used in a variety of ways, to sew the fringes, the bottom of the buttons for a variety of women's coats and school uniforms.

- **Judon knit fabric; Special fabrics with a more specific texture**

Judon fabrics with a rhombus shape are very common in men's and women's clothing, especially winter clothing. Judon fabric is usually made from a combination of cotton yarn with other fibers, and the higher the amount of synthetic fibers, the higher the quality and durability of the fabric.

packaging:

Cloth roll

The fabric roles are cylindrical or rectangular. The cylindrical ones are called roles and the rectangular ones are called books.

Fabric Bundles

Any kind of cloth that is used to package several pieces of cloth is called bundle. Usually the standard number of book packages in a bunch is 1, 7 or 2 ones, and the standard number of roll packages is usually 6. Export packaging cloths are made of strong plastic threads.
